Professional Summary

Senior Full Stack Software Engineer with nearly 30 years of experience delivering robust, high-performance software solutions across diverse industries. Operating through AGYNAMIX, I specialize in taking complex, system-critical applications from prototype to production—whether leading development efforts or integrating into distributed teams, bridging intricate backend architectures with modern, responsive frontend frameworks.

Core Services & Consulting

- **End-to-End Application Development:** Complete solutions from requirement gathering through implementation and deployment.
- **High-Performance Backend Systems:** Scalable, concurrent backends using Rust, Scala, and Java.
- **Modern Frontend Architecture:** Responsive, client-centric UIs with ReactJS, TypeScript, and Angular.
- **Cloud & DevOps Integration:** Mission-critical deployments and containerization with AWS, Docker, and Ansible.

Technical Stack

Languages:	Scala, Java, Rust, Kotlin, TypeScript, JavaScript, Clojure
Frameworks & UI:	ReactJS, Angular, Lift, Jetpack Compose for Desktop, Vue
Databases:	PostgreSQL, MongoDB, Oracle, MySQL
Cloud & DevOps:	AWS, Docker, Ansible

Notable Clients & Projects

- **Enterprise Collaboration—Scaled Agile, Inc.** 2019 – 2024
  Key role in developing and modernizing an online planning platform for remote learning, PI planning, and collaborative events. Designed a push-based data warehouse integration.
- **Compliance Management—Ascendant** 2013 – 2019
  Senior engineer and mentor for a multi-tenant SaaS platform, balancing industry-specific compliance with engineering problem-solving.
- **Social Privacy Platform—Sgrouples / MeWe** 2011 – 2012
  Implemented system-critical features and managed AWS deployment for a secure, group-based communication platform.
- **Telecommunications & Banking—T-Systems, 1822direct** 2005 – 2011
  High-performance data extraction, migration frameworks, and correspondence management solutions.

Own Products & Innovations

- **AGYNAMIX Invoicer** 2025 – present
  Modern desktop invoicing application (Kotlin, Jetpack Compose for Desktop) for the DACH market. Fully GoBD compliant with ZUGFeRD and XRechnung e-invoice support.
- **Symnix—Cloud Provisioning Platform** 2022 – present
  Co-founded web application with a high-performance Rust / PostgreSQL backend for cloud server setup and provisioning.
- **Net-Herald Monitoring Software** 2005 – 2006
  Monitoring system for water supply companies built with Java, Spring, PostgreSQL, and an Eclipse RCP frontend using GEF for real-time data visualization.

Education & Publications

Diploma in Computer Science (Dipl.-Inf.) | Technical University Chemnitz-Zwickau, 1991 – 1996
Author: *Lift Web Applications How-To* (Packt Publishing, 2012) | Speaker at ScalaDays & Scala Exchange, 2013
