

Torsten Uhlmann

AGYNAMIX® | Senior Full Stack Software Engineer & AI Integration Consultant

📍 Buchenweg 5, 09380 Thalheim, Germany | ✉ tuhlmann@agynamix.de | ☎ +49 151 12412427 | 🌐 agynamix.de
🌐 [linkedin.com/in/torstenuhlmann](https://www.linkedin.com/in/torstenuhlmann) | 🐙 github.com/tuhlmann | ✂ [xing.com/profile/Torsten_Uhlmann2](https://www.xing.com/profile/Torsten_Uhlmann2)

👤 Professional Summary

Senior Full Stack Software Engineer with nearly 30 years of experience delivering robust, high-performance software solutions across diverse industries. Operating through AGYNAMIX, I specialize in taking complex, system-critical applications from prototype to production—whether leading development efforts or integrating into distributed teams, bridging intricate backend architectures with modern, responsive frontend frameworks. Recent work includes applied AI integration and Agentic Engineering, including AI-assisted PDF invoice analysis in AGYNAMIX Invoicer using structured PDF extraction, vision models for scanned documents, JSON schema outputs, semantic checks, alternative candidates, and user-in-the-loop review. I love learning new things and meeting new people. Over the years I have worked with a plethora of different programming languages—from Cobol, C++, and Java through Scala and Clojure to Rust and TypeScript. Technologies change, developer roles change, but the desire to create something useful always stays strong. I authored the book "Lift Web Applications How-To" (Packt Publishing, 2012) and regularly contribute to open-source projects on GitHub. I am particularly good at integrating into teams and getting myself deeply involved in the subject matter.

🏢 Core Services & Consulting

End-to-End Application Development

Complete solutions from requirement gathering through implementation and deployment.

High-Performance Backend Systems

Scalable, concurrent backends using Rust, Scala, and Java.

Cloud & DevOps Integration

Mission-critical deployments and containerization with AWS, Docker, and Ansible.

Applied AI & Workflow Automation

Practical AI integration for business workflows using Agentic Engineering, LLMs, document AI, and structured extraction.

Modern Frontend Architecture

Responsive, client-centric UIs with ReactJS, TypeScript, and Angular.

⚙️ Technical Skills

Applied AI	● ● ●	Agentic Engineering, LLM Integration, Document AI, PDF Data Extraction, Vision Models, JSON Schema Outputs, Ollama, OpenAI-compatible Providers
Languages	● ● ●	Scala, Java, TypeScript, JavaScript, Rust, C++
Languages	● ● ●	Kotlin, Go
Languages	● ● ●	Python, Ruby, Perl, Groovy, C#, Clojure, ClojureScript
Frontend Frameworks	● ● ●	ReactJS, Angular, AngularJS, VueJS, SolidJS
Backend Frameworks	● ● ●	Lift (Scala), Spring (Java)
Desktop Frameworks	● ● ●	Jetpack Compose for Desktop, Eclipse RCP, SWT / JFace
Databases	● ● ●	PostgreSQL, MongoDB, Oracle, MySQL
Cloud & DevOps	● ● ●	AWS, Docker, Ansible, Linux
Methodologies	● ● ●	Agile / Scrum, SAgile, CI/CD, Test-Driven Development

Languages: **German** (Native) | **English** (Full professional proficiency) | **Russian** (Elementary)

📁 Work Experience

**Senior Frontend Developer**
TXODDS, Ltd.

Aug 2024 – May 2025
VueJS 3 · TypeScript · JavaScript · Docker

Developed multiple frontend applications for the TX-Scores professional scouting network—a platform connecting the sports betting ecosystem to ultra-low latency sports odds delivery.

- Built several frontend applications for the tx-scores project using VueJS 3 with TypeScript.
- TX-Scores is a professional scouting network—not casual coverage. A community of scouts and analysts with real-time dedicated analyst oversight for every game.
- Docker-containerized deployment pipeline.

**Senior Fullstack Developer**
iCombine UG

Feb 2022 – Aug 2022
Scala · Lift · AngularJS · React · TypeScript · PostgreSQL

Led the migration of an expert talent-pool and project-matching platform from AngularJS to React, using a bottom-up approach that combined both component types during the transition.

- Architected and implemented bottom-up migration strategy from AngularJS to React, enabling co-existence of both component types during the transition.
- Worked with Scala and the Lift web framework for backend services.
- Platform connects experts to the right project roles, trainings, and peers via skills, interest, and availability matching.

**Senior Fullstack Developer**
Scaled Agile, Inc.

May 2019 – Jul 2024
Scala · Lift · Angular 12 · AngularJS · TypeScript · Docker · PostgreSQL · AWS

Key role in developing and modernizing an online planning platform for remote learning, PI planning, and collaborative events. Five-year engagement with significant product growth.

- Expanded Collaborate's reach by integrating collaborative planning features such as remote PI planning and online training classes.
- Backend built with PostgreSQL, Scala, and Lift; containerized and deployed on AWS.
- Frontend migrated from legacy AngularJS 1 to Angular 12 / TypeScript within an NX workspace.
- Designed a push-based data warehouse integration.

**Senior Software Developer**
Ascendant, Inc.

Jul 2013 – Feb 2019
Scala · Lift · Go · AngularJS · MarkoJS · JavaScript · Docker · MongoDB

Senior engineer and mentor in a small team of high-profile developers building a multi-tenant SaaS compliance and risk management suite. Balanced industry-specific compliance requirements with engineering problem-solving over a 5.5-year engagement.

- Implemented state-of-the-art frontend with AngularJS and MarkoJS; backend with Scala, Lift, and MongoDB.
- Mentored junior developers while furthering expertise in financial services, asset classes, and trading patterns from a compliance perspective.
- Some services implemented in Go.

“Torsten worked with our team at Ascendant for roughly six years. He was one of our earliest developers and served as a senior engineer and mentor to junior developers. He thrived in our distributed, virtual environment and handled the pressures related to a multi-tenant SaaS platform with grace. Were it not for our acquisition by private equity and shifting capital expenditures, he would remain with us indefinitely, as I would want.”

— Neil Visnapuu, Managing Director, Ascendant Compliance Management

**Scala & Lift Consultant**
Twisp, Inc.

Mar 2013 – Jul 2013
Scala · Lift · MySQL · Squeryl

Developed a Lift-based personalized information engine application.

- Built a multi-user Scala/Lift web application using MySQL, Apache Shiro, and Amazon Cloudsearch.

Scala & Lift Consultant Underscore Consulting

Nov 2012–Apr 2013

Scala · Lift · MongoDB · Cloudbees

Developed part of a Scala/Lift client application for an innovative real-time interactive NFC platform (TagTrail) for a US corporation. Delivered a rich reporting tool as an international (D, UK, AU) team.

- Took responsibility for—and delivered—a rich reporting tool within a cloud-based NFC/QR-code marketing campaign tracking platform.
- Collaborated in a small international team (Germany, UK, Australia).

“He brought technical knowledge, especially with Lift, Scala, and Angular. He worked with the customer to understand their needs. As well as generally contributing to the project, he took on responsibility for (and delivered) a rich reporting tool.”

— **Richard Dallaway**, Partner, Underscore Consulting LLP

Senior Software Developer Sgrouples, Inc. (now MeWe.com)

Sep 2011–Sep 2012

Scala · Lift · JavaScript · MongoDB · AWS

Implemented system-critical features and managed AWS deployment for a secure, group-based privacy-conscious social communication platform.

- Independently implemented many business-critical features of the application, managed deployment on AWS servers, performed MongoDB migrations and maintenance.
- Built frontend JavaScript/CSS/HTML5 components using jQuery alongside Scala/Lift backend development.
- Significantly contributed to evolving the application from prototype to production readiness within a few months.
- Worked in an internationally distributed remote team; communication in English.

“It has been my greatest pleasure working with Torsten. He has proven himself capable of taking on any task or challenge given to him. He is an excellent Scala developer, an expert in the Lift framework, and has demonstrated mastery of several types of databases. He is a committed, hard-working, resourceful programmer, a faithful team player, and a true pleasure to work with. Whatever future teams or projects he joins will be lucky indeed.”

— **Jonathan Wolfe, Ph.D.**, Chief Scientist, Sgrouples.com

Software Developer / Sub-Project Lead

Mar 1996 – Sep 2011

T-Systems

Java · C++ · Perl · Oracle · Eclipse RCP · JBoss · Cobol · CORBA · PHP

15-year engagement spanning multiple major projects at T-Systems (formerly T-Systems GEI GmbH and T-Systems SL SI), progressing from COBOL conversion work to leading sub-projects and building high-performance enterprise applications.

- Maintained and extended a mid-sized Eclipse RCP application for the in-house test department (EMF, Teneo/Hibernate, Oracle, JDBC).
- Extended a data transformation framework for mass-data migration (HP-Tandem NonStop, Oracle 9i); classifiable as EAI/EII system.
- Created an Eclipse RCP DSL application using the XText framework, enabling non-developers to write business rules.
- Built and extended a Perl-based distributed test framework for cross-machine automated system testing.
- Designed and developed a high-performance data extraction application processing millions of records from multiple Oracle schemas; multi-threaded for throughput.
- Developed invoice generation system using LaTeX with email delivery (optional encryption/signing); scalable multi-process C++ backend communicating via CORBA with an Oracle database and Java/J2EE frontend.
- Developed an Online Payment Platform (Santorin) using J2EE on BEA WebLogic and Portal with Oracle; and a CORBA bridge linking a legacy server application to a Tomcat server farm.
- Created COBOL converters for customer invoice data targeting AFP printers; developed Java GUI applications for invoice layout specification.
- Sub-project lead from August 1999.

“The freelancer has a very broad spectrum of technological knowledge. As architect and developer he worked confidently with object-oriented programming concepts. All work was completed to our fullest satisfaction on time. Beyond the concrete programming tasks he showed very high engagement. He identified errors and improvement potential in requirements and implementation. He supported his colleagues beyond his own area of responsibility. Working with him was very pleasant. He was a treasure for the project team.”

— **Project Center Team Leader**, T-Systems GEI GmbH

“The consultant is proficient in C++ and Java; he works confidently with object-oriented programming concepts. All work was completed to our fullest satisfaction on time. I would very much like to work with him again.”

— **Project Leader**, T-Systems

JSF Developer

Jun 2008 – Oct 2008

1822direkt Sparkasse Frankfurt

Java · JSF · JBoss · Tomcat · LaTeX

Developed a JSF frontend for managing and creating customer correspondence at a German bank. Letters were generated template-based via a LaTeX backend and delivered as PDF or sent to a high-volume printer.

- JSF 1.2 with MyFaces on Tomcat 5 and JBoss.
- LaTeX-based document generation pipeline for customer printables.

Software Developer

Apr 1995 – Apr 1996

G & K Datensysteme GmbH

C · Pascal · MS-DOS

Developed drivers and associated software for retail cash registers, scanners, and printers used with the client's point-of-sale software. Also contributed to development of the retail cash register software itself.

- Driver development for cash registers, scanners, and printers.
- Contributed to the core POS application.

Software Developer

Feb 1994 – Apr 1994

Leicher GmbH

C++ · MS-DOS

Developed converter software for converting data between the Datanorm industry standard and the client's in-house software standard.

Software Developer

Mar 1993 – Jun 1993

Jahn Büroorganisation

Pascal · MS-DOS

Developed management software for tracking printers and copiers leased by the client to its customers.

AGYNAMIX Invoicer

2025 – present

Kotlin · Jetpack Compose for Desktop · SQLite · Agentic Engineering · Ollama · GoBD

invoicer.agynamix.de

Modern desktop invoicing application for freelancers and small businesses in the DACH market. Fully GoBD-compliant with ZUGFeRD and XRechnung e-invoice support, plus AI-assisted incoming invoice analysis using local and remote OpenAI-compatible providers.

- Cross-platform (Windows, macOS, Linux) with a modern Jetpack Compose UI.
- AI-assisted PDF invoice analysis extracts supplier, invoice number, dates, VAT amounts, totals, and other metadata, reducing manual entry from minutes to review and confirmation.
- Uses structured PDF extraction, vision models for scanned documents, JSON schema outputs, semantic checks, alternative candidates, and user-in-the-loop review; local Ollama models support privacy-sensitive business documents.
- Features: customizable invoice templates, automatic numbering, VAT calculations, payment tracking, customer management, and reporting.
- Offline-capable with local data storage—no cloud dependency. Emphasizes data sovereignty and financial management for professionals.

Symnix – Cloud Provisioning Platform

2022 – present

Rust · TypeScript · React · PostgreSQL · Docker

symnix.com

Co-founded web application with a high-performance Rust / PostgreSQL backend for cloud server setup and provisioning.

- Allows individuals and organizations to create, manage, and monitor multiple hosts with multiple installed applications.
- Streamlines server management using latest industry standards and best practices; Docker-containerized deployment.

AGYNAMIX Numerix

2015 – 2017

Clojure · ClojureScript · MongoDB · Reagent · re-frame

github.com/tuhlmann/numerix

Multi-tenant tool for freelancers and small companies with modules for time tracking, invoice generation, document management, knowledge base, chat rooms, calendar, and user management.

- Invoice generation from tracked time; PDF output via Flying Saucer.
- Role-based permissions system similar to Apache Shiro's wildcard permissions.
- Multi-document upload and knowledge base with notifications.

Unser Gartenverein (Garden Community Manager)

2012 – 2016

Scala · Lift · JavaScript · MongoDB

github.com/tuhlmann/gartenverein

Hosted web application for managing German garden communities (allotment associations): tenant management, meter readings, invoicing, document management, and shared calendar.

- Manages water and power meter readings collection and invoicing.
- Dashboard overview with quick navigation to all areas.

AGYNAMIX Simidude

2008 – 2011

Java · SWT · JFace · Install4j

github.com/tuhlmann/simidude

Cross-platform network clipboard and file sharing tool. Automatically discovers other instances on the local network and enables drag-and-drop file transfer and clipboard synchronization across machines.

- Runs on Windows, Linux, macOS, and in virtual machines.
- Automatic LAN discovery; drag-and-drop file/directory transfer between connected computers.
- Available as 30-day trial with online payment.

First AGYNAMIX product—monitoring software for water supply companies. Server-side Java application with Eclipse RCP GUI for real-time data visualization.

- Server: Java 5, JMX, Spring, PostgreSQL, ESB bus architecture for component decoupling.
- GSM modem connectivity for SMS alerts; OPC (OLE for Process Control) library for connecting to existing industrial software.
- Eclipse RCP client using GEF for charts and real-time data visualization.
- Led a dedicated team to bring the product to market.

Education

Diploma in Computer Science (Dipl.-Inf.)

1991 – 1996

[Technical University Chemnitz-Zwickau](#) | Computer Science

Equivalent to a Master's degree. Focus areas included databases and algorithms. Started working at a major telecommunications company before finishing studies.

Publications

Author: *Lift Web Applications How-To* | Packt Publishing, 2012

Practical guide to building web applications with Lift, the Scala web framework. Published by Packt Publishing.

Training & Speaking

Java Trainer

Sep 2011 – Dec 2011

[ML Consulting](#) | Dresden and Berlin, Germany

Taught several Java and programming basics courses. Received very good ratings from students; the consulting facility manager requested return engagements.

Speaker – Lift 3 & Client-Side JavaScript Frameworks

Jun 2013

[Scala Days 2013](#) | New York, USA

Conference talk about Lift 3 and integrating client-side JavaScript frameworks with the Scala web framework.

Speaker – Lift 3 & Client-Side JavaScript Frameworks

Dec 2013

[Scala Exchange 2013](#) | London, UK

Conference talk about Lift 3 and integrating client-side JavaScript frameworks with the Scala web framework.

About Me

I grew up in the beautiful Ore Mountains of Germany, where I still live. I'm married to my wife Silvia and we have two kids. In eighth grade I was given a programmable BASIC calculator with a memory of 1024 bytes. Though very limited, it allowed me to create useful solutions for school and helped me reduce my homework. After secondary school I was admitted to study computer science at Chemnitz Technical University—remarkable given that in the last year of school, in 1988 in East Germany, I was told I would never be allowed to study as a Christian. Just a year later the history of our nation completely changed. I finished my studies in 1996 and started working for a large IT supplier in different projects until 2004, when I started my freelancing career.

Volunteer Translator

For many years I have been volunteering as a translator for international guests and events.

Coffee Enthusiast

I'm a coffee aficionado and vastly enjoy a good cup of espresso. I wonder if more than a decade of Java programming nurtured this habit.

Sourdough Bread Baker

A few years ago I started my bread baking adventure. After many mishaps we now mill our own flour and bake our own sourdough bread. Apart from being healthier, this process puts my feet back on reality—especially when most of the things I work with are only virtual.

Open Source & Community

- **BibleTime** — A Bible study software for Unix and KDE. Project consisted of multiple developers, translators, and testers. Initiated and initially coordinated by me.
- **KPriMa** — A print manager for managing print jobs across various devices under Unix and KDE.

- **KMsgModem** — A program for reading fax and voice messages from the USR Message Modem, running under Unix and KDE.
- **Newtonlink Modules** — Perl modules for the Newtonlink program (a Unix communication tool for the Apple Newton MessagePad). Converts Newton data into a meta format or the format of selected Unix programs.

Interested in working together? I'd love to hear from you
